

Hello,

In 2022, we worked hard to develop innovative restaurant technology features to help you growth your business. While it was a challenging task, we are thrilled with the accomplishments we made and grateful for your support.

Some of our most notable feature releases from 2022:

Store Finder 2.0	MENU Dispatch 2.0	Pay API
Improved store selection experience, with emphasis on map and restaurant location which lead to an increase of 11.6% in store selection conversion rate.	A revamped version of Dispatch which addresses the pain points of our customers and drivers and helps select the best matching setup for your restaurant brand.	Open API to connect your preferred eCommerce payment processor to the MENU platform for payment method tokenization and transaction processing.
